Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 22; Page 24; 51pp; English.
Claim 25; Page 24; 51pp; English.
Wild-type p53 protein binds specific fragments of human chromosomal
DNA. Each fragment contains no more than one monomer of the double
DNA. Each fragment contains no more than one monomer of the double
                                                                                                                                                                                                                                                                                                                                                                 16-DEC-1992.

be used for diagnosis of p53 mutations and onset and development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  these sequences. Thus a function of p53 may be mediated by its ability to bind specific DNA sequences in the human genome. The sequence shown is a consensus sequence for p53 DNA binding. When
                    restored to neoplastic cells having a mutation in their p53 gene. See also Q31949-84.

A cDNA sequence encoding the human isoform of cholecystokinin-B/
gastrin receptor was isolated (see T10094). The present sequence is
that of a PCR primer which was used in cloning the full-length cDNA.

Ş 맑 Matches Query Match coding for a TGF-beta-like protein was isolated. The protein encoded Example 1; Page 6; 15pp; German. A cDNA library prepared using total RNA from human liver was 04-JAN-1996. 27-MAR-1995; 011243. Transforming growth factor beta cDNA clone MP-121 internal primer TGF-beta; MP-121; mitogen; differentiation; induction; promotion; maintenance; morphogen; tissue regeneration; dental implantation; T11107 standard; cDNA; 24 BP. properties making it (or fusion proteins comprising it or heterodimers of the protein with a cystine knot motif protein) useful for inducing tissue regeneration. The present sequence is that of a PCR primer by the cDNA insert has mitogenic and differentiation-inducing to contain a new sequence. Part of the insert from this clone was A cDNA library prepared using total RNA from human liver was and differentiation-inducing activity, e.g. for use in Bechtold R, 01-JUL-1994; DE-423190. properties making it (or fusion proteins comprising it or heterodimers by the cDNA insert has mitogenic and differentiation-inducing used to re-screen the human liver cDNA library and a 2272 bp fragment to contain a new sequence. Part of the insert from this clone was regions within the TGF-beta family. Amplification products were subjected to PCR amplification using primers corresp. to conserved and differentiation-inducing activity, e.g. for use in DNA encoding transforming growth factor beta MP-121 - has mitogenic WPI; 96-050788/06. Bechtold R, 01-JUL-1994; DE-423190. DE19511243-A1. Synthetic wound healing; polymerase chain reaction; PCR primer; ss. 09-AUG-1996 (first entry) Sequence amplification using primer LO2 (i.e. this sequence) and primer LOI1 human liver library; positive clones were then subjected to PCR based on a DdeI fragment comprising nucleotides 931-1304 of the coding for a TGF-beta-like protein was isolated. The protein encoded used to re-screen the human liver cDNA library and a 2272 bp fragment subcloned and sequenced; one clone (designated pSK-MP121) was found regions within the TGF-beta family. Amplification products were subjected to PCR amplification using primers corresp. to conserved Example 1; Page 6; 15pp; German. DNA encoding transforming growth factor beta MP-121 - has mitogenic WPI; 96-050788/06. (BIOP-) BIOPHARM GES BIOTECHNOLOGISCHEN ENTWICKL subcloned and sequenced; one clone (designated pSK-MP121) was found (BIOP-) BIOPHARM GES BIOTECHNOLOGISCHEN ENTWICKL. 2272 bp insert. The DdeI fragment was used as a probe to screen the 27-MAR-1995; 011243. (see T11109).
